DESCRIPTION:

OGNIS-D is a complex of Ossein hydroxyapatite compound and minerals which is used in osteoporosis and increased mineral requirements during pregnancy and lactation.

Vitamin-D plays an important role in the maintenance of organ systems. Vitamin-D regulates the calcium and phosphorus levels in the blood by promoting their absorption from food in the intestines, and by promoting re-absorption of calcium in the kidneys. It promotes bone formation and mineralization and is essential in the development of an intact and strong skeleton.
